Javier Lopez

Head of Product and Engineering @ MooveCars | Business
Transformation | Business Analyst | Product owner | Delivery
Manager

Greater Madrid Metropolitan Area

Summary

As Head of Product and Engineering at MooveCars, I am responsible for leading strategic technology portfolios to align business vision with product strategy. With expertise in digital transformation, Agile, Scrum, and Waterfall methodologies, I oversee complex programs and manage governance frameworks tailored to project needs. My role includes managing an international delivery ecosystem of five multidisciplinary squads across Spain and India, fostering collaboration and continuous improvement.

With over a decade of experience in business transformation and technology delivery, my mission is to enable scalable and resilient digital solutions. My career has been defined by a commitment to operational excellence, structured delivery governance, and empowering teams to achieve measurable business outcomes. At MooveCars, I am focused on driving innovation and optimizing core digital platforms to support global growth.

Experience

MooveCars

Head of product and engineering

September 2024 - Present (1 year 7 months)

Madrid, Spain

- Project Delivery Manager. Adapt projects to waterfall or agile principles according to the needs and nature of each project. Cost estimation. Establish project and management timelines, ensuring project completion on schedule and within budget.
- Organization of kick-off meetings and validation workshops. Dialogue, monitoring, and coordination of international multidisciplinary teams.
- Leading 4 squads of 4 members each (DEV, PO, and TO) in Spain, plus one squad offshore composed of developers, infrastructure, data, and support teams. In total leading an IT Department of around 40-50 people.

- Management and coordination of external teams and vendors, both for software consulting services and service providers (Google, Udemy, etc.), ensuring alignment with project objectives and delivery timelines.
- Technical and Product Owner support to define the end-user strategy and determine the business value of different initiatives.
- Facilitation of communication, ensuring knowledge exchange and transparency of tasks between stakeholders and IT to mitigate risks and manage change control.
- Analysis of requirements and their breakdown into tasks for assignment to the technical team in collaboration with the Tech Lead (TL). Technical training and simplification of complex topics into actionable recommendations that the business can understand and execute.
- Support for UAT certification and testing, integration support, and post-production activities. Identification and resolution of gaps when necessary.
- Tracking metrics and creating KPIs once the solution is deployed to measure performance and outcomes.
- Establishment of guides, standards, and methodologies for project management and optimization.
- Management and maintenance of Moovefleet products and autonomous platforms for Spain, Europe, and the US.

Tools:

Jira (project management, admin), Confluence (admin), Postman, SQL Server, AI Copilot, ChatGPT, Claude, Power BI, Azure, GCP, FinOps.

Equifax

Senior Business Analyst - Product Owner. Fraud applications

May 2022 - October 2024 (2 years 6 months)

Madrid, Spain

- Interviews with end users. Requirements gathering and management, making them their own, advising and prioritizing resources and corporate strategy.
- Collaboration with product owners to understand end-user strategies and determine the business value of various initiatives.
- Requirements analysis and decomposition for the development and assignment of tasks to the technical team in conjunction with TL. Technical training, synthesizing complexities into simple actions and recommendations that the business can extract and execute.
- Project management. Facilitating communication, ensuring knowledge sharing and task transparency between stakeholders and IT to mitigate risks and facilitate/manage change control.

- Project planning and scoping, adapting them to waterfall or scrum methodologies according to needs and establishing reasonable objectives. Cost estimation. Establishing project timelines and management, including escalations, to complete the project on time and within budget.
- Leading two squad of 4 members each in Spain & India between TL, and DEVS
- Organization of kickoffs and validation workshops.
- Interlocution, monitoring, and coordination of international multidisciplinary teams (Spain, India, Chile, and UK).
- Certification and testing in UAT, integration, and post-production support. Identification and resolution of gaps if necessary.
- Monitoring performance metrics once the solution is implemented.
- Establishment of guidelines, standards, and methodologies for project management and optimization to assist in both product improvement and decision-making, leveraging metrics and data obtained from projects.

Tools:

Jira, Confluence (requirements documentation), POSTMAN (test case automation), Oracle database and PL/SQL, Postgree, Java J2EE, FTP, GCP (Bigquery, dataflows, bigqueries, pubsubs, etc.) JMeter (stress and performance testing) Elastic Search, Datafabric
